DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 32 is rejected under 35 U.S.C. 103(a) as being unpatentable over US 4,202,764 to Afflerbaugh.

In the specification and figures, Afflerbaugh discloses the device as claimed by applicant. With regard to claim 32, Afflerbaugh discloses a device for controlling ultrafiltration comprising a blood withdrawal passage 12a that receives blood from a patient and an infusion blood passage 12b that returns treated blood to the patient (see FIG 1, column 3, lines 1-8). The device further comprises a pressure measurement device comprising a filtrate chamber in the form of outlet line 24, blood chamber in the form of blood inlet and outlet lines connected to inlet 12a and outlet 12b, and a semipermeable membrane in dialyzer 12 (see columns 2-3, FIG 1). The device further comprises blood-side pressure detectors 44, 46, and filtrate side pressure detectors 48, 50, which are capable of measuring a pressure differential between the filtrate side and the blood side of the device.

Allowable Subject Matter

3. Claims 33-41 are allowed.

4. The following is an examiner's statement of reasons for allowance: The prior art fails to disclose or suggest the method claimed by applicant.

Afflerbaugh teaches the method of setting a desired transmembrane pressure based on ultrafiltration rate, but does not teach the method of halting filtrate flow through a filtration system and using a pressure difference across a semipermeable membrane to measure osmotic pressure and using the osmotic pressure measurement to adjust the rate of fluid removal from the blood.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

5. Applicant's amendment and arguments filed 11 April 2007 have been entered and fully considered.

6. Applicant's arguments with respect to the pending claims have been considered but are moot in view of the new ground(s) of rejection.

7. Although Examiner erroneously examined the previously cancelled claims in the non-final rejection mailed 12 January 2007, that examination does not revive the cancelled claims for prosecution. Applicant cancelled claims 1-31 via preliminary amendment on 27 August 2003. According to 37 CFR 1.121(c)(5), a claim which was previously canceled may be reinstated only by adding the claim as a "new" claim with a

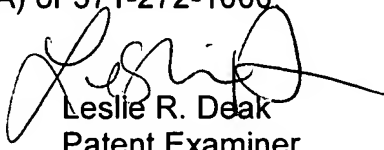

new claim number. See MPEP 714. Accordingly, claims 1-31 are no longer pending in the instant application.

8. This is a non-final rejection on the pending claims 32-41.
